EUROPEAN BUSINESS AVIATION

➜ A productive way to travel

Business Aviation is all about people and productivity. By facilitating travel, it strengthens personal relationships with business partners, employees, and key stakeholders – wherever they may be. It also saves time, increases productivity, and boosts employee performance.

25 000 Airport pairs in Europe directly connected exclusively by Business Aviation

2 hours Average time saved per trip over the fastest commercial service within Europe
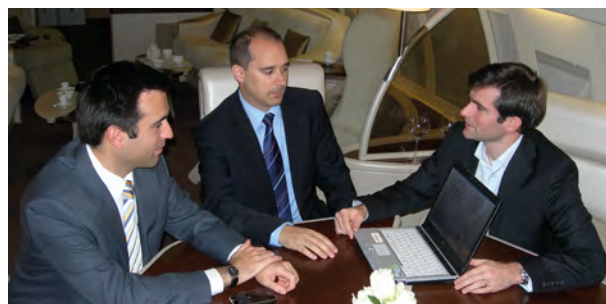

€ 2 840 Average productivity gain achieved per passenger per trip

Why Business Aviation?

Business Aviation makes travelling faster, easier, and more flexible. It also increases the productivity of users and their companies while ensuring passengers' safety and privacy.

A flexible travel solution

Business Aviation enables users to have full control over their travel schedules. Business aircraft are available 24/7, can be dispatched within 90 minutes' notice, connect airports which are not directly served by commercial airlines, and allow users to reach multiple destinations in a single day.

A more productive way of working

Business Aviation facilitates face-to-face meetings in even the most difficult circumstances. Business aircraft are also equipped with the latest communication technologies, allowing travelers to stay connected.

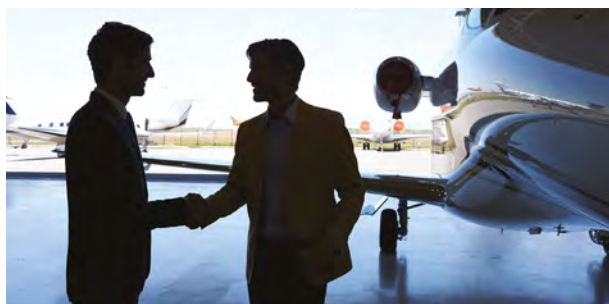

A more efficient way of flying

Within Europe, Business Aviation users usually save more than 2 hours per trip. This is achieved by avoiding congested commercial passenger hubs and taking off from smaller, less busy Business Aviation airports that are often located close to large cities.

A safe and secure way to fly

Business aircraft are among the most sophisticated and safest aircraft flying. Security is guaranteed by passengers being known and pre-screened by the operator. Privacy also minimizes risks of physical threat and industrial espionage.
